

User Sentiments

I started by looking online at how users were experiencing the app. What needs and wants weren't met. A lot of the users had a problem with how premium was structured and affected the community

Users prefer full-featured app with ads

akom

Users relish old days when it was free and community driven. Having so many pay walls ruins it for them.

akom

Users want a more polished experience

akom

Many think the subscription is too expensive

akom

People can't get into the hobby because most caches are premium only

akom

The community gets divided by having a premium membership

akom

Some premium features like the ability to make or sort lists should be basic functionality. People are unhappy that they are not.

akom

Persona

A lot of the good feedback was about how the app gets people outside or brings them together. Based on that I created a persona the summarized those values.

John

Age: 45

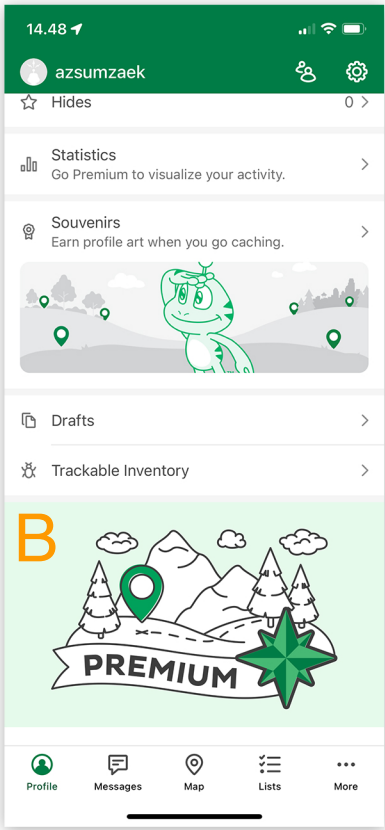

Residence: UK

Family: Married with kids

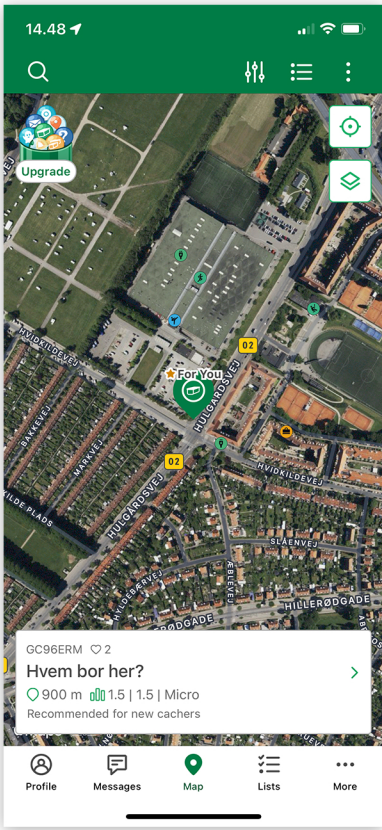

Scenario: John has taken a trip with his family and a few other friends and their families. It's going to be three days of camping and hiking. John and the group are hoping to spot all the geocaches along the way. John wants to feel a sense of community, enjoy nature along the way and maybe learn a few bits about the place through some of the caches.

App Notes

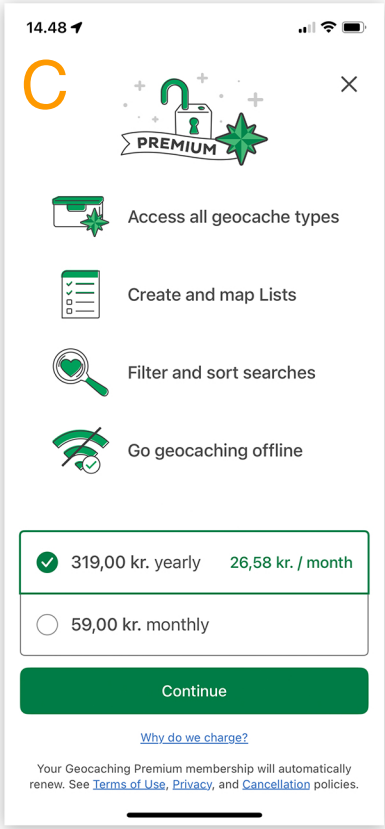

A

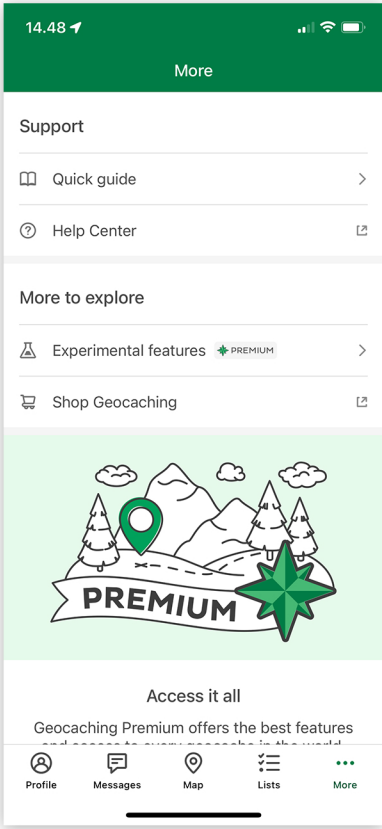

I compared the user feedback with my own observations of the app

A
Premium Badge taking away the functional space

B
The same ad taking up space in two different sections

B

B
In one of the sections it takes up roughly 65% of the space

C
The whole list area acts as an ad in the free version providing nothing else

D
The functional items in this area can be moved and merged with settings

D

Affinity Diagram

Putting together an affinity diagram helped me organize new and existing features that can create bigger sense of community and engagement. I also marked ways to monetize the app in a less abrasive way.

User Profile

Expanded statistics

Detailed statistics could be a paid feature

Having user profile more front and center in the section

Custom backgrounds for your profile could be a paid feature

Gamifying user profile

Supporter badge and leveling up the more months you support

Messages

Having log drafts in messages

Having cache related communication in messages

Lists

Lists you saved or own should be able to launch you into a map view of list caches

Being able to browse top lists

Saving lists offline maps should be free

Being able to create private lists could be a paid feature

Being able to subscribe to other peoples lists

Saving lists offline maps in vector could be a paid feature

Maps

A mode where you get a compass and beeping when you get closer

Immersive navigation mode could be a paid feature

Miscelanious

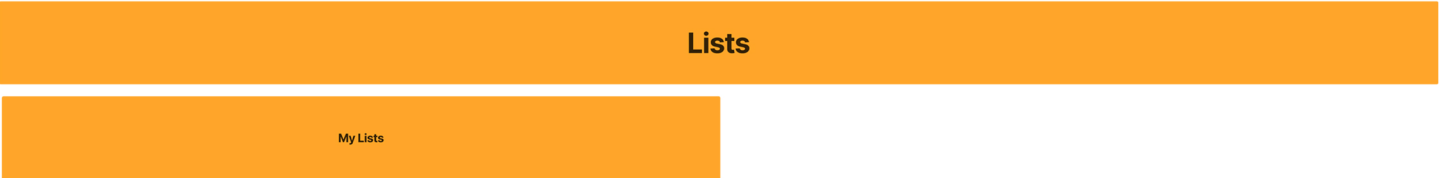

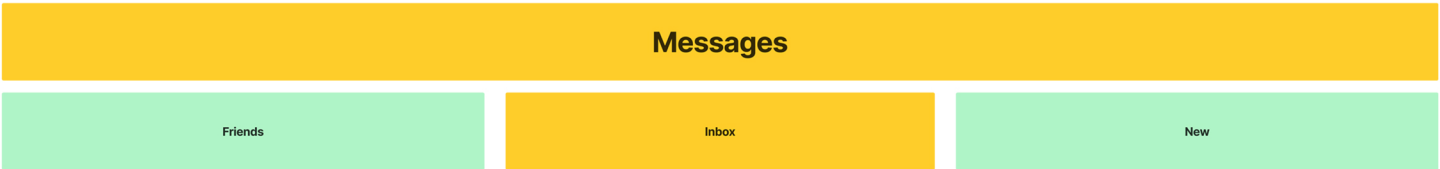

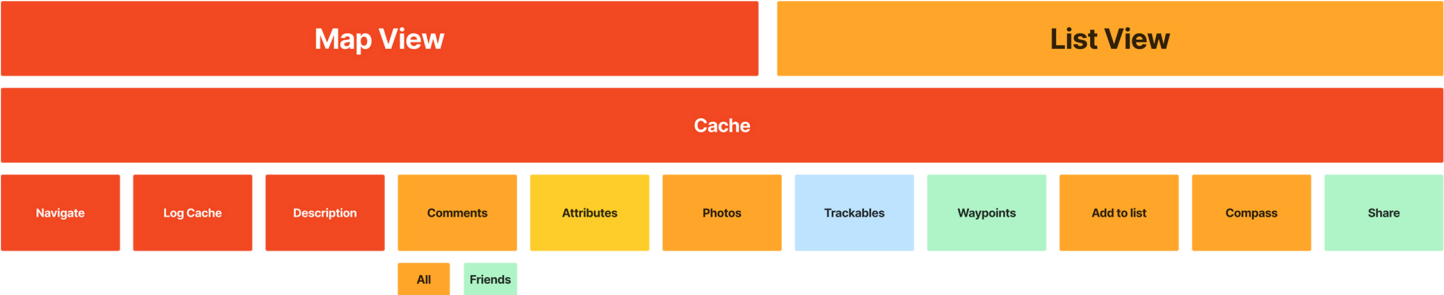

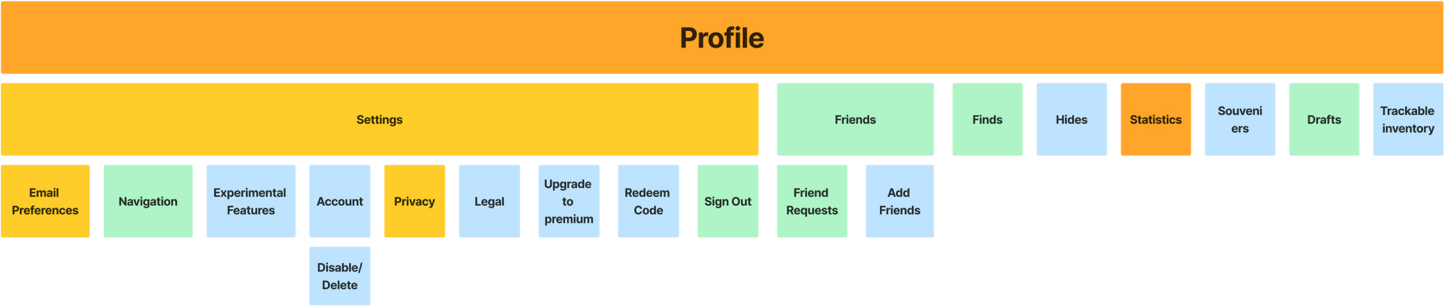

Creating some of the elaborate caches could be a paid feature

Access to experimental features

UI that is not centered around selling premium

I tested the app on a group of users and made observations on most frequently used features. Out of that I created a heat map that would inform restructuring efforts.

App Map

Screen

Option

Based on user feedback, notes and observations and the heat map, I created a new structure for the app. The goal was to remove persistent ad space, unify the app visually, and use the space better.
